PaleoTech Origins Series — PART 5

The Founding of PaleoTech
Occurrence-based summary (no timelines)

Purpose
This document summarises the decision to establish PaleoTech as a formal organisational structure. The founding marked a transition from independent research to governed stewardship, not a shift toward commercial delivery.

Context for the Decision
At this point, multiple elements had converged: a coherent upstream context layer (PaleoIQ™), a structured regime interpretation framework (ENSOLink™), and recognition that future application could influence real-world decision making. Responsibility began to outweigh curiosity.

Why an Organisation Was Necessary
Continuing as an informal personal project was no longer appropriate. A formal entity was required to separate discovery from application, impose governance over exposure, and preserve intellectual discipline as the work expanded.

Founding Principles
PaleoTech was established with explicit principles:
• Physics-first context before models or narratives
• Governance before growth
• Support for professional judgement, not replacement
• Explicit communication of limits and uncertainty
• Chronology over hindsight

What the Founding Was Not

The founding of PaleoTech was not a product launch, a forecasting service, or a declaration of predictive capability. It represented containment and stewardship.

Why This Phase Matters

This phase established the organisational boundary that allows subsequent systems, trials, and collaborations to proceed responsibly and transparently.
